SPECIES	Eucalyptus macrorhyncha
COMMON NAME	Red Gum, Red Stringybark, Cannons Stringybark or Capertee Stringybark
ORIGIN	S.A., or N.S.W., or Vic. N.S.W.
DESIGN USE	Fencing, shade tree

HEIGHT
20-30 m high

SPREAD
20m

HABIT
The bark is fibrous, rough and persist to the smaller branches, brown to red-brown colour outside, reddish brown inside. A mature tree might have a trunk half the trees height and up 1m in diameter, the trunk is usually straight.

FLOWERS
White flowers

FLOWERING PERIOD
Mid summer to mid autumn. January to April-May

FRUIT
Fruits globose, pedicellate, 3 locular, 6–10 mm long, 7–12 mm diam. Disc raised. Valves exserted. Chaff cuboid, chaff same colour as seed.

FORM
The crown is moderately dense with branchlets usually short, giving a rounded, rather compact crown.

CLIMATIC TOLERANCES
It is adapted to relatively poor soils and cold conditions, to adverse weather conditions during flowering; known to be moderately drought tolerant or known to be tolerant of protracted droughts; regenerates foliage after damaging fire; tolerates frosts in the 0° to -5°C range or tolerates heavy frosts colder than -5°C

HORTICULTURE
grows on range of soil types which are usually clayey but well-drained.
