<b>SPECIES</b>	Grevillea juniperina
<b>COMMON NAME</b>	Juniper-leaf Grevillea, Juniper Grevillea
<b>ORIGIN</b>	Eastern New South Wales and south-eastern Queensland
<b>DESIGN USE</b>	For borders and containers

#### HEIGHT

1–2.5m

#### SPREAD

Up to 1.2m

#### HABIT

Evergreen plant with dense and needle-like foliage.

#### FORM

A variable species which occurs in prostrate or decumbent forms as well as shrubby forms. In some forms the pungent tip is very sharp.

#### FLOWERS

Flowers clusters are of the typical 'spider' form occurring in the leaf axils and at the ends of the branches. Flower colour may be greenish-yellow, yellow, apricot, pink or red. Copious quantities of nectar are produced which attract many birds and insects.

#### FLOWERING PERIOD

Throughout the year, peaking between mid winter and early summer.

#### VARIATIONS

- Typical Form (cascading shrub, very prickly foliage and apricot, occasionally red, flowers)
- Broad-leaved form (decumbent in habit, yellow or red flowers)
- Canberra form (robust shrub, prickly foliage and red, yellow or pink flowers)
- Corang River form (bushy shrub, red or yellow flowers)
- "Molonglo" (spreading plant, larger orange flowers with red styles)
- "Lunar Light" (variegated leaves, orange-pink flowers)

#### CLIMATIC TOLERANCES

A hardy and adaptable species and it is tolerant of moderate to heavy frost.

#### HORTICULTURE

It prefers a sunny location but will accept dappled shade and grows well in most well-drained soils.
